

The complete solution for prepack processes, with optional verification

Features

- When used together, the KERN PCJ precision balance and EasyTouch PrePack offer the ideal solution for prepack processes. Legal regulations mean that you only have to check random samples rather than having to check the weights of all mechanically packaged food-stuffs. This requires an accurate balance and a complex statistical calculation. This complete solution for prepack processes combines both requirements in one user-friendly operation
- With EasyTouch SET-17 PrePack you can carry out all kinds of prepack processes. After every check, the software clearly indicates whether the result is "OK" or "NOK". In addition, it allows you to adjust the filling or bottling quantity in order to reduce losses due to overfilling to a minimum.
- As an alternative to random sampling checks, the software also enables full checking of all filled products, including individual price labelling. For this purpose, EasyTouch offers a powerful label printing function which runs automatically in the background in production mode

- The bundle contains:
 - Precision balance KERN
 - 1 PCJ 600-2M
 - 2 PCJ 6000-1M
 - Software EasyTouch SET-01 Base
 - Software EasyTouch SET-17 PrePack
 - USB interface adapter KERN KUP-03
