FEATURES

- Note: Prerequisite for this set is the basic program SET-01 Base
- Backup Scheduler: Automate your data backups and reap the benefits of continuous, scheduled processes which keep your valuable information safe in the background
- Automatic data backups: Save time and money through automatic backups at defined intervals. This ensures consistent, reliable record keeping, reduces downtime and minimises the risk of data loss in the event of disruptions
- Backup file configuration: Users can define the name of the backup file individually, including a master name and a timestamp as a postfix. The backup directory and type of backup can also be individually adapted – whether it's the creation of a new file, or overwriting or expanding an existing file
- Backup interval: The interval for backups can be set in hours, several times or once a day, weekly, monthly and annually
- Backup messages: Every automatic data backup will be displayed in the backup directory with the file name as a link to the backup file
- Backup history: The progress and status of all backups are logged and can be traced at any time
- Restore: In the event of a fault, the last saved backup can be easily restored using the "Restore" function

License information

- Licensing: One license can be operated on one terminal device (PC, laptop, Android-tablet)

PLEASE NOTE FOR YOUR ORDER

- Prerequisite for this set is the basic program SET-01 Base

KERN Pictogram Overview

	EasyTouch: Suitable for the connection, data transmission and control through PC or tablet
	Central user administration for KERN EasyTouch functions. Primary master data, for example, first name, surname, image, is stored for a user. Each user is assigned a user role, which has individually configurable permissions in the KERN EasyTouch App. Through this structure you can create standard users, supervisor users, etc. You can log into the KERN EasyTouch App with a user name and a password.
	All printed and stored weighing and measuring data is stored in this memory. The data is stored either on the local display device or centrally – for all connected weighing systems – in a server directory (Save-Data Server or Save-Data Cloud). Dynamic data can be recalled and printed out at any time and/or exported as a table.
	All stored data is saved in a tamper-proof manner. Changes to master data are also saved in the dynamic data memory in a tamper-proof manner (Data Traceability)
	Device qualification: standard-compliant qualification concept, which includes the following validation services: Installation qualification (IQ), function qualification (OQ)
	Central data memory function for additional storage of all measuring data in a central, local server directory. This is where measuring data is stored from all weighing systems connected using KERN EasyTouch, as well as all installed KERN EasyTouch functions. The advantage of this, particularly for users with several weighing systems, is having all weighing data consolidated in just one database and only having to search for individual measuring data from different balances in one table. Save-Server data storage is also tamper-proof and cannot be changed.
